It features cloud storage and 256-AES encryption, along with WD's own backup software. Usually, external hard drives with traditional drives are more affordable and come in larger capacities.

SSDs are much faster than traditional hard drives, and because they don't have any mechanical or moving parts, they're generally more robust and smaller in physical size as well. But if speed is your top priority – for example, if you move a lot of large files, or want to run programs off the drive – then choose an SSD. 1 specification It plugs directly into PCs and Macs with either a newer USB-C port or USB-A, is roughly the size of a matchbox and being a flash storage device, contains no moving parts, so can survive being dropped. • Jump to: Not only does an HDD or SSD give you more capacity for large files, but because the devices are portable, they can be taken with you on the go and plugged into different machines – handy if you swap between PCs and Macs regularly.
